

EXPERIMENT 11

Database with AUTO_INCREMENT

AIM:

To create Auto Increment sequence on the given relation.

DESCRIPTION:

SEQUENCE:

In MySQL, a sequence is a **list of integers generated in the ascending order i.e., 1,2,3...**

Many applications need sequences to generate unique numbers mainly for identification e.g., customer ID in CRM, employee numbers in HR, equipment numbers in services management system, etc.

To create a sequence in MySQL automatically, you set the AUTO_INCREMENT attribute to a column, which typically is a primary key column.

SYNTAX:

```
CREATE TABLEtable_name(  
col_name1AUTO_INCREMENT PRIMARYKEY, col_name2, col_name3, ....);
```

Questions

1. Create a new table Patient_Auto and populate Patient_ID automatically using AUTO_INCREMENT.
2. Insert a patient record by manually specifying the Patient_ID.
3. Remove the AUTO_INCREMENT property from Patient_ID.

OUTPUT

1)

```
345 • CREATE TABLE Patient_Auto
346 (
347     Patient_ID INT AUTO_INCREMENT PRIMARY KEY,
348     Patient_Name VARCHAR(20),
349     Age INT,
350     Gender CHAR(1),
351     Disease VARCHAR(20)
352 );
353 • INSERT INTO Patient_Auto
354     (Patient_Name, Age, Gender, Disease)
355     VALUES
356     ('Arun', 25, 'M', 'Fever'),
357     ('Priya', 22, 'F', 'Diabetes'),
358     ('Rahul', 30, 'M', 'Asthma'),
359     ('Sneha', 28, 'F', 'Migraine');
360 • SELECT * FROM Patient_Auto;
```

Result Grid					
Filter Rows:					
Edit:					
Export/Import:					
Wrap Cell Content:					
Patient_ID	Patient_Name	Age	Gender	Disease	
1	Arun	25	M	Fever	
2	Priya	22	F	Diabetes	
3	Rahul	30	M	Asthma	
4	Sneha	28	F	Migraine	

2)

```
363 • INSERT INTO Patient_Auto
364     (Patient_ID, Patient_Name, Age, Gender, Disease)
365     VALUES
366     (10, 'Karthik', 26, 'M', 'Cold');
367 • SELECT * FROM Patient_Auto;
```

Result Grid					
Filter Rows:					
Edit:					
Export/Import:					
Patient_ID	Patient_Name	Age	Gender	Disease	
1	Arun	25	M	Fever	
2	Priya	22	F	Diabetes	
3	Rahul	30	M	Asthma	
4	Sneha	28	F	Migraine	
10	Karthik	26	M	Cold	
NULL	NULL	NULL	NULL	NULL	

3)

```
370 • ALTER TABLE Patient_Auto
371     MODIFY Patient_ID INT NOT NULL;
372 • DESC Patient_Auto;
```

Result Grid  Filter Rows: Export:  Wrap Cell Content: 						
	Field	Type	Null	Key	Default	Extra
▶	Patient_ID	int	NO	PRI	NULL	
	Patient_Name	varchar(20)	YES		NULL	
	Age	int	YES		NULL	
	Gender	char(1)	YES		NULL	
	Disease	varchar(20)	YES		NULL	

RESULT:

The records from the tables are displayed using auto_incrementsequence on the given relation.
